

Meet the New Wave, FINEWAVE

Double Cooling System

FineMEC has developed its own proprietary cooling structure, currently patent pending. **Patent Pending** (Application No. 10-2024-0193948)

Two Treatment Modes

Shot Mode

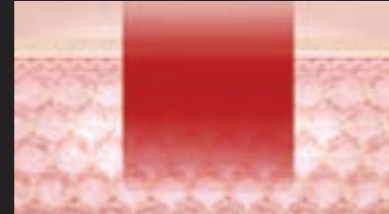

Delivers short, intense thermal stimulation to areas with reduced skin elasticity, promoting collagen regeneration.

Targeted lifting for specific areas

Precise care for smaller treatment zones

Rubbing Mode

Heat is evenly distributed across a wider area, reaching down to the fat layer.

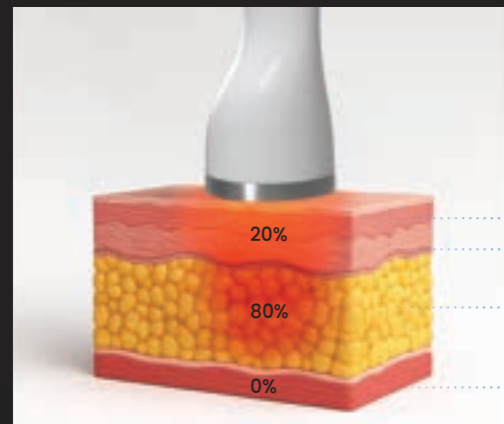

Fast treatment for larger areas

Smooth and gentle thermal delivery

Precise Energy Delivery to Target Layers

- Epidermis] Cooling prevents thermal damage.
- Dermis]
- Fat] Concentrates heat in the fat layer
- Muscle] No energy absorption

Finewave delivers energy precisely to the target layer without damaging the epidermis.

- Thermal energy is concentrated in the fat layer with minimal stimulation of the skin surface.

Dual Handpieces for Face & Body

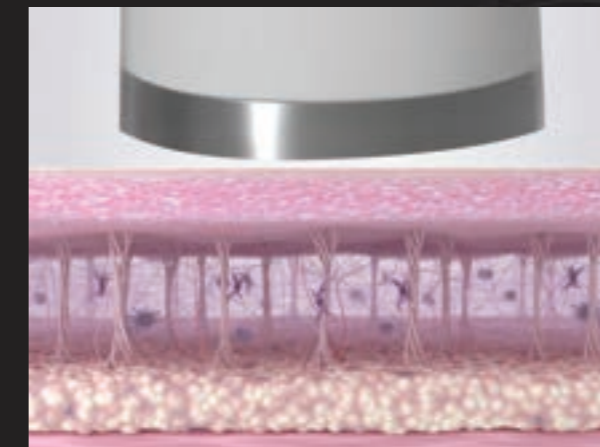

Small handpiece
Optimized for facial areas

Large handpiece
Designed for larger body areas

Principle of Microwave Energy Control

Finewave ensures safety by activating microwave energy only when skin contact is detected. This prevents accidental radiation and provides stable, controlled treatment energy.

No Contact

No energy is released into the air

Contact

Energy is delivered safely into the skin

Our website

Finewave is a non-invasive microwave system developed to support safe and controlled body contouring procedures.

From small facial areas to large body treatments, the dual handpiece system enables smooth, gentle care.

FINEWAVE

Microwave Technology
for Face&Body

Non-Invasive Treatment

Minimal Downtime

Double Cooling System

Natural Outcomes
